Quiklo®  
opening solutions  
MADE IN ITALY

A close-up photograph of a modern door handle system. The main body of the handle is a light grey or white color, featuring a sleek, curved design. On the right side, there is a circular recessed area containing the brand's logo and text. The logo consists of the word "Quiko" in a bold, lowercase, sans-serif font, with a registered trademark symbol (®) at the top right. Below "Quiko", the words "opening solutions" are written in a smaller, lowercase, italicized font. Underneath that, "MADE IN ITALY" is printed in a smaller, uppercase font. At the bottom of the handle, there is a dark, textured rectangular panel that appears to be made of a different material, possibly metal or plastic. A circular button or cap is attached to this panel, likely serving as a lock or release mechanism.

# MOOVY

Easy to install, MOOVY series sliding gate operators of QUIKO are the perfect choice to automate any type of sliding gate; thanks to the wide range of available models indeed, customer can choose the most appropriate opener depending on the weight of the gate to be automated. The frontal manual release lever allows the user to manually handle the gate in case of emergency, for example, during electrical blackouts. The proper operation of the motor is guaranteed for long time thanks to the sturdy materials used for its production like aluminum, bronze and steel. Wear and tear of the internal mechanical parts is kept to a minimum since the reducer is highly lubricated with permanent grease. MOOVY series gearmotors can handle sliding gates of large sizes and are, therefore, also suitable for heavy duty applications in the industrial field; thanks to its powerful threephase motor indeed, QK-M2000T model can handle sliding gates with a maximum weight of 2000Kg. Everything takes place safely as crash prevention is guaranteed by mechanical clutch.

*Semplici da installare, i motoriduttori QUIKO della serie MOOVY costituiscono la giusta scelta per l'automazione di qualsiasi tipo di cancello scorrevole; grazie alla vasta gamma di modelli disponibili infatti, l'utente può scegliere il motoriduttore più adatto a sé, a seconda del peso del cancello da movimentare. La leva di sblocco frontale consente all'utente di movimentare il cancello manualmente per bypassare casi di emergenza, come per esempio i blackout elettrici. Il corretto funzionamento del motoriduttore negli anni è garantito dalla robustezza dei materiali utilizzati per la sua costruzione quali alluminio, bronzo e acciaio. L'usura della meccanica interna è ridotta al minimo mediante l'elevata lubrificazione del riduttore, che avviene a grasso permanente. La serie di motoriduttori MOOVY di QUIKO riesce a movimentare cancelli scorrevoli di notevoli dimensioni ed è quindi adatta anche ad un utilizzo intensivo in campo industriale; il modello QK-M2000T infatti, grazie al potente motore trifase montato, può movimentare ante scorrevoli dal peso massimo di 2000Kg. Il tutto avviene in totale sicurezza grazie alla frizione meccanica antischiaffamento.*

Simples à installer, les opérateurs QUIKO de la série MOOVY constituent le juste choix pour l'automatisation de tous les types de portails coulissants; grâce à la vaste gamme de modèles disponibles, en effet, l'utilisateur peut choisir l'opérateur le plus adapté, selon le poids du portail à manœuvrer. Le levier de déblocage frontal permet à l'utilisateur de déverrouiller le portail en cas d'urgence, comme par exemple les manques d'électricité. Le fonctionnement correct de l'opérateur à long terme est garanti par la robustesse des matériaux utilisés pour sa construction: aluminium, bronze et fer. L'usure de la mécanique est réduite grâce à la lubrification du réducteur avec graisse. La série des opérateurs MOOVY de QUIKO peut motoriser des portails coulissantes de grandes dimensions et il est donc apte aussi à une utilisation intensive dans le domaine industriel; en effet, le modèle QK-M2000T, grâce à son puissant moteur triphasé peut manœuvrer des portails jusqu'à 2000Kg. Le tout en sécurité totale grâce à la friction mécanique anti-érasement.
